Roll No : 69

Class: TEIT2

Batch: 16

Lab: IPLab

Date: 28th July 2022

Experiment No: 01

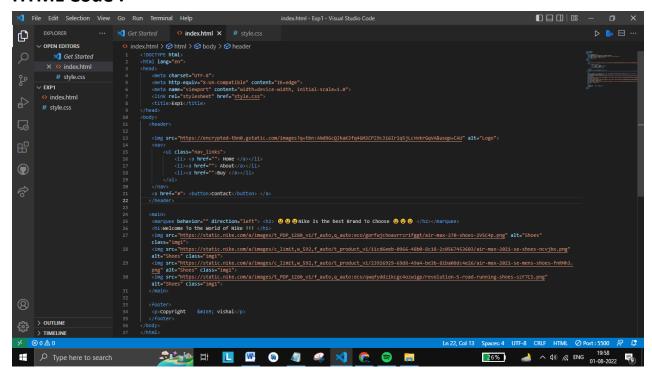

Aim: Implementation of Html Tags to create a web page

Theory:

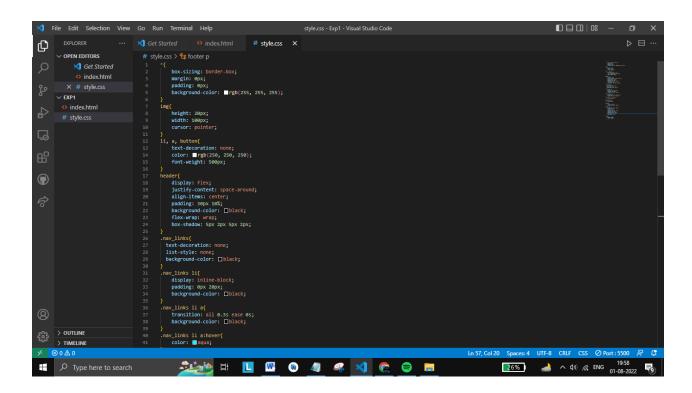

- 1. <div> tag: The <div> tag defines a division or a section in an HTML document.
- **2. tag:** The tag is used to embed an image in an HTML page. Images are not technically inserted into a web page; images are linked to web pages.
- **3. <h1> tag:** The H1 tag is an HTML element used to define the main heading of a webpage.
- **4. <a> tag:** The **<a>** tag defines a hyperlink, which is used to link from one page to another. The most important attribute of the **<a>** element is the href attribute, which indicates the link's destination.
- **5. tag:** The **tag** defines a paragraph. Browser automatically add a single blank line before and after each **element**.
- **6. <marquee> tag:** <marquee> tag is used to rotate or move towards left/right certain words/sentences
- 7. tag: The tag specifies the list items which can be ordered or unordered list
- **8.** tag : The tag specifies the unordered list elements.
- **9. <nav> tag:** The <nav> tag is used for navigation of pages from one page to another.

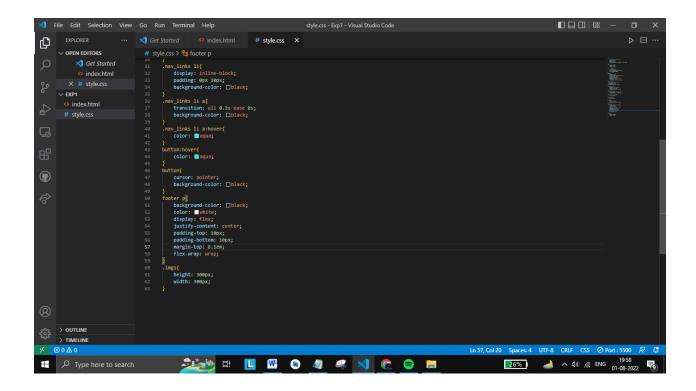

Code:

HTML Code:

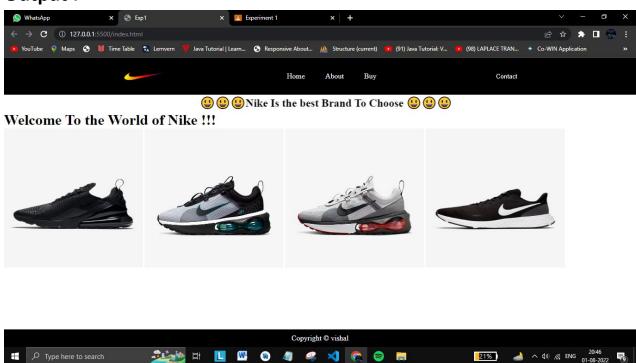

CSS Code:

Output:

Conclusion: Thus, we used HTML tags to build our web page.
